

IMPROVEMENTS From Argon

09 May 2021

Best Argon Team

Argon

Mainnet Preparations of Argon Team

We are improving day by day.

The headings mentioned in this article are;

New Interface

Improvements to the application

Changes in the Approver model

Performing re-audit of the revised smart contracts

These improvements and changes have been made to increase the security of the Argon platform and to facilitate its use.

All of the mentioned developments will be published with mainnet.

Argon team needs 4 weeks to activate mainnet.

Completing all the details of the new interface + Re-audit process + Updating of smart contracts. These transactions will take place within the next 3 weeks.

After the new interface is completed, we need 1 week for the integration of the new smart contracts and the interface. According to this calculation, **Argon** will be on **Mainnet** after 4 weeks.

To reach developer team:

dev-team@argon.run

World's first and only blockchain-based freelancer platform on the Binance Chain network working with fully decentralized and smart contracts

Totally New Interface

We renew the entire interface of Argon.run with every detail. We are sure that the new look will give us a more corporate and professional look.

We would like to show you photos from the interface, but we think a little excitement will not be bad at all. 2 new UI / UX designers joined our team for interface renewal.

We hope the entire design is ready within 3 weeks. Then we will adapt our new smart contracts to the new interface.

Improvements on the application

You will now receive a web notification for each message in the chat section. And in the new interface, the page where the jobs are listed will be completely changed. And your conversations will be visible on the same screen.

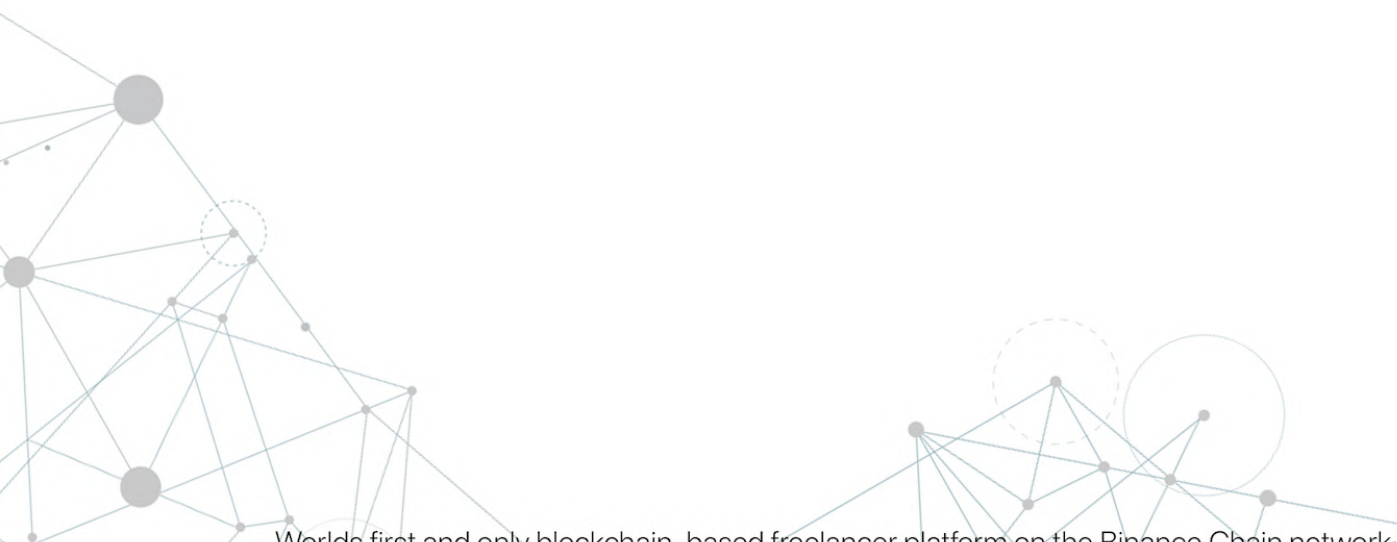

Slow and late loading data are all data provided from Blockchain and we have made the improvements we can for them. And in the profile section, we were able to reduce the loading speed of all data from **14.7 seconds to 4 seconds**.

Now that we have changed the smart contract structure, freelancers will be able to add as much data as they want and will have a much improved profile.

Freelancers will be able to get their new jobs on **Argon with 0 commission** if they fill their public profiles well. We will provide this ecosystem.

We want to add another stable payment method to Argon. We will be working on partnerships for this.

Now freelancers, approvers, and customers can now choose a profile photo.

Improvements on the Approver

Approver assignments will no longer be completely random. There will be a job category that every Approver can review. Work outside of its category will not be defined to that approver. In this way, an Approver who does not understand the software will not have to approve a job related to the software.

If there is no registered Approver account in the same category as the job category, the job will be assigned to the Argon team.

Although this is centralized, we need it.

To be approver, you must lock 20,000 ARGONs.

The lock will not have an expiry date. You won't be able to break your lock only when you have a job that requires active confirmation. If you break the lock, your account will be disabled.

World's first and only blockchain-based freelancer platform on the Binance Chain network working with fully decentralized and smart contracts

Revised smart contracts

We had to change the structure of our smart contract due to the byte code limit on the Binance smart chain and we needed further development. And we created an updatable smart contract structure. And we worked on gas optimizations.

However, you will continue to see central errors in the new report. Because these are just a risk and warning. Argon by its nature needs a center.

Updated smart contracts will be audited again for the safety of our investors, users and the team.
